WEBINAR ON “PAIN AND DISCOMFORT CAUSED BY PARTURI-TION IN COWS AND SOWS”

Date and time: 5th September 2013 at 4 p.m. CET.
Speaker: Dr. Eva Mainau

Language: English

Duration: The webinar will include a formal presentation of 45 minutes followed by a discussion of up to 30 minutes.

Content: Parturition, especially dystocia, is an intrinsically risky process for both mother and young as it may increase the incidence of maternal health problems and perinatal mortality. This webinar will focuses on parturition as a painful process in cows and sows. Principal causes and consequences of pain during parturition, the main pain indicators and the effect of analgesia after parturition will be explained. The goal is to increase the knowledge of peripartum period in order to optimize the parturition process and reduce its negative consequences on health, welfare and productivity.

Target audience: Veterinarians working on cattle / pig production or in the livestock sector in general with particular interest in the period around parturition.

Procedure: Participants must send an e-mail to info@fawec.org and several days before the webinar, a link will be provided. On 5th September at 4 p.m. CET, connect to the link provided. Password will not required. During and after the webinar, participants can send questions or comments by e-mail to info@fawec.org.

System requirements: No special requirements are needed. Updated browser (Internet Explorer, Google Chrome, Mozilla Firefox, Safari...), Java Script or similar, stable internet connection and speakers or headphones are needed.
